The Energy Forum Indonesia 2017 is an exclusive forum for energy leaders and executives to convene and participate in various discussions on providing solutions to Indonesia’s energy issues and policy, technology and business. This one-day forum organized by Listrik Indonesia in cooperation with Siemens Indonesia that will be held at the Shangri-La Hotel Jakarta on May 3, 2017 with the theme “Supporting Indonesia Energy Infrastructure through increased Local Content, National Capacity Building and Digitalization”.

Indonesia’s economy is undergoing unprecedented development with industrialization and rapid urbanization resulting in increasing demand for electricity. Indonesia is currently striving to complete the development of its power infrastructure to reach 99% electrification ratio in 2025 as well as through increasing the role of local industries in supporting and accelerating the construction of power projects.

To objectify this, attention should be made to address several factors, such as the readiness and capability of industry and technology, human resources, as well as sufficient engineering capability to deliver timely and quality results.

Thus the government is facing another challenging task towards formulating regulations that support cross-sector interests. The program is also in line with PLN’s commitment to synergize the local private sector and multinational companies. The positive impact of the synergy grants a number of benefits to the manufacturer, such as the role as an electricity supplier for the local industries as well as the role as an employer to grow the local industries. This way, both local industries and human resource capacity building will thrive and will contribute positively to Indonesia’s economic development.

The forum results is expected to create solutions to enhance the national economy, sustainable future, and open up opportunities for supporting the acceleration of power infrastructure development program in Indonesia.
